- *1.25mm COMPATIBLE coming soon*
- *NO ROLL DESIGN*
- *REUSABLE*
- *GREAT FOR BARE FIBER ADAPTERS*

Application and Description

The exclusive **PURGER™** (Patent Pending) Kits are the only products on the market designed to provide the installer, test technician, or scientist with a quick and easy way to clean broken fibers or other debris from fiber optic ferrules, connectors, and bare fiber adapters. With the **PURGER™**, it is no longer necessary to find nearly invisible alignment holes in field conditions nor is it necessary to use compressed air to dangerously try to blow away glass shards..

To use, simply plug the clogged connector, bare fiber adapter, or ferrule into the custom fitted end of the **PURGER™** then insert a cleaning wire into the cone at the opposite end of the **PURGER™**. Push the wire through the clogged ferrule to clean.

PURGER™ Kits are available in standard two and five packs and include a compact 'no-roll' container, 3 strands of high strength cleanout wire, and a **PURGER™** fixture. Replacement wire is also available.

The **PURGER™** is a necessity in any installation kit that permits the cost effective recovery of even the least expensive of connectors.

Specifications

PX-E501	PURGER™ 3-pak Kits for 1.25mm ferrules
PX-E502	PURGER™ 3-pak Kits for 2.50mm ferrules
PX-E511	PURGER™ 5-pak Kits for 1.25mm ferrules
